SjurSound

pronounced "sure sound"

SjurSound scream*IT*

Description:

A vintage distortion effect takes you from overdrive to screaming sustain and distortion. The sound of the Ibanez Tubescreamer was the inspiration for developing scream*IT*. Although there are many distortion pedals out there, the Tubescreamer has become the defacto standard among guitarists. So it was natural to study its circuitry and understand the characteristics that make it sound so good. These characteristics were then captured in a signal processing algorithm and the scream*IT* audio plugin was born. Plug in today and scream*IT* all night long.

Controls:

Drive: adjusts the sensitivity and amount of distortion.

Tone: adjusts the tone and sharpness of the signal.

Volume: adjusts the level of the output signal.
